

START TRIAGE

Pearls:

- For the purposes of this protocol, children are ages 6 and younger. One additional step is included for children: give 5 rescue breaths prior to determining final triage status.
- *For children, the target RR <15 or >45.
- **For children, determine if the child responds to pain.
- Upon reaching a triage level, the triage of the patient should stop and the patient tagged accordingly.
- Control any major bleeding during the triage process.
