

TEAM TRANSPORTS

1. Level: EMT, AEMT, Paramedic
2. Purpose: This procedure outlines the expectations of our crewmembers when providing transportation for teams and their patients.
3. Procedure: In addition to assisting with loading of equipment, LaSalle personnel will assist with the team as requested (not to exceed the medic's scope of practice) and will accompany the team in the module of the unit.
4. Equipment: In most cases, teams will have and utilize their own equipment. LaSalle equipment can and should be utilized as needed to assist the team.
5. Transport of team and patient
 - 5.1. Maximum number of personnel in module for transport may not exceed the total number of restraints available
 - 5.1.1. In cases in which the number of team members is the same as the number of restraints available, LaSalle personnel will both ride in the cab of the unit for transport
 - 5.1.2. In all other cases, LaSalle personnel will accompany the team in the module of the unit
 - 5.1.2.1. If an ALS unit is transporting the team, the paramedic will accompany the team and patient
6. Documentation
 - 6.1. Documentation of the ePCR is the responsibility of the medic that accompanied the team and patient in the module of the unit during transport
 - 6.1.1. In the event in which both crewmembers ride in the cab of the unit, the paramedic is responsible for the documentation of the ePCR if the unit is ALS. If a BLS resource is utilized, the EMT can complete the documentation of the ePCR.
 - 6.2. ePCR Documentation
 - 6.2.1. Inter-facility Information
 - 6.2.1.1. Document specialty resource needed for hospital to hospital transport
 - 6.2.2. Demographics
 - 6.2.2.1. Patient face sheet
 - 6.2.2.1.1. In cases in which the team is transporting a neonate, obtain a face sheet on the mother and the baby at the sending hospital
 - 6.2.2.1.2. The face sheets should be attached to the medical record
 - 6.2.2.2. Protocol 1 or Protocol 2
 - 6.2.2.2.1. Team Transport
 - 6.2.2.3. Event Log
 - 6.2.2.3.1. Document ABC and neuro assessment
 - 6.2.2.3.2. Document vital signs in event log with Team, Transport as crew member responsible
 - 6.2.2.3.3. Document any interventions provided with LaSalle equipment i.e. oxygen, suction, etc.

TEAM TRANSPORTS

6.2.2.4. Narrative

6.2.2.4.1. Include patient diagnosis

6.2.2.4.2. Documentation should include assessment and treatment provided by team and include specific treatments:

6.2.2.4.2.1. Endotracheal intubation

6.2.2.4.2.2. Suction

6.2.2.4.2.3. BVM/Ventilator

6.2.2.4.2.4. Oxygen

6.2.2.4.2.5. Chest tube

6.2.2.4.2.6. ECG monitoring

6.2.2.4.2.7. IV/IO

6.2.2.4.2.8. Medications being infused/IV Pump

6.2.2.4.2.9. Any other interventions provided by team
